

MULTITURN LATHES

A comprehensive line of CNC Teach lathes, perfect for many of today's CNC turning applications.

MULTITURN

This highly versatile flat bed design handles a wide range of turning applications: long shafts, bar stock, castings and with the gap removed, large diameter face plate work. Engineered for precision and maximum CNC performance with features found only on high-end CNC lathes. The Clausing MultiTurn is equipped with the latest generation Fanuc /w Alpha System built into the control package with all digital control and drives or the Siemens CNC Control with Icon Key based conversational programming or Conventional ISO G-code programming. A wide choice of tooling options are available to further enhance the versatility of the machine. Quick-change tool posts and automatic indexing turrets are available to maximize output in almost any situation. The heavy-duty cast iron machine is ideal for: CNC users looking for increased versatility at a very low capital outlay, first time CNC buyers looking for programming simplicity, job shops looking for increased output, low to high production runs, and education and training facilities needing a real lathe with step-by-step simplicity.

The perfect machines for many of today's CNC turning applications!

Specifications & Features of the MultiTurn Series

- Control panel rides on a rail ensuring it can be positioned conveniently for the operator
- Headstock spindle, shafts, and gears are made of high-grade alloy steel, hardened and precision ground for higher speed use with less heat and noise generation.
- Anti-friction PTFE material between saddle and bed greatly reduces friction and has superior dampening properties to reduce chatter during machine cycles.
- Heavy-duty cast iron bed ways are induction hardened over 50 Rc (5000/6000/7000) and 45 Rc (1000/2000/3000/4000)
- 'Warren' bed design provides very high torsional stiffness, eliminating bed deflection even under heavy cutting conditions.
- Extra wide bed maximizes support for saddle and cross slide assembly for smooth machining, even of large workpieces.
- Superior headstock lubrication with an external electric oil pump ensures a long life of the spindle bearings and gearing
- Automatic oil system, with low oil alarm, to maintain proper lubrication of slideways and ballscrews
- Digital AC servo drive system provides powerful and accurate axis positioning
- Variable AC spindle drive motor for exceptional range of spindle speeds
- Automatic three range headstock allows full horsepower at low RPM for more efficient machining of large components and hardened steels
- Fully enclosed, interlocking guarding to maintain a clean work environment

Machine Bed

Clausing MultiTurn's cutting-edge lathe design and construction quality begins with its unique bed design. MultiTurn beds use high quality cast iron, with a unique 'Warren' type design for maximum strength and optimum chip clearance. In addition, the MultiTurn lathe bed is mounted on cast-iron bases, to provide a solid foundation. Slideways are hardened and specifically ground to ensure high-precision, parallel operation of the lathe at all times.

Operator's Console

The operator's console is located and designed for the operator's convenience and efficiency with the cutting tool. The handwheels are installed at the ideal ergonomic height for ease of use and have the MultiTurn's popular "one-click-one-micron" rotational feel sensitivity. The complete operator's control panel moves on its own independent carriage which allows it to be moved quickly and effortlessly to the side during loading and set up.

Drive Train

Into the design and development of all MultiTurn lathes goes the technical expertise of specialist from Clausing's partnered companies. Their combined research programs ensure that all new MultiTurn lathes feature the most advanced developments in spindle bearing technology and chuck design. This provides the highest possible spindle speeds and optimal chuck performance for high accuracy turning and maximum load carry capacity.

Headstock

Crucial to precision turning and component quality is the design and capability of the headstock. These lathes have top rated spindle motors for extra power and increased torque across all speed ranges. The 'bottom end' torque has been increased by over 75%, giving accurate performance even at low speeds. All Clausing MultiTurn lathes are equipped with three range headstock enabling the correct range to be automatically selected from the lathe's control system.

MULTITURN XS SERIES

FANUC CONTROL WITH ALPHA CONTROL SYSTEM

Clausing/MultiTurn XS Series:

The XS series features the Fanuc control with Colchester/Harrison enhanced 'Manual Guide i' assisted programming allows the operator to generate part programs quickly and efficiently through the use of easy-to-understand conversational style cycle prompts. The Fanuc control package comes with an all-digital control and drives offering exceptional value and reliability.

The Fanuc is one of the most user-friendly controls in the industry today and is loaded with many standard features to increase your productivity...

- Multi-repetitive Cycles G70-G76 for automatic finishing, roughing, drilling, threading, and grooving cycles
- Toolpath Graphics for verification of part profile
- 10.4" Color LCD Display
- Inch/metric data input
- Absolute/incremental programming in the same block
- Thread cutting leads range from 0.00001" to 1.0"
- Threading retract
- Variable lead threading
- Multiple and continuous threading
- Rigid tapping
- 2 axes linear and circular interpolation
- Constant surface speed/direct RPM programming
- Menu programming format with operator prompts
- Sequence number search
- Sequence number comparison and stop
- 128K part program memory
- Background editing
- Extended part program edit
- 64 sets of tool offsets
- Optional stop/block delete
- Run hour part counter
- Tool nose radius compensation
- Tool geometry/wear offsets
- Tool life management
- Work coordinate system G52-G59
- Automatic reference zero return G28
- Reference position return check G27
- Spindle orientation
- Machine alarm diagnostic
- Absolute encoders
- Manual pulse generator
- RS 232 interface port
- Mirror image
- Turret crash protection
- Dynamic graphic display
- Pattern data input
- Manual intervention and return
- Chuck/tailstock barrier
- Latest Fanuc Beta i series spindle and Beta i axis motor

Harrison/Colchester Manual Guide *i* for XS-Series

CNC Turning

The real strength of Manual Guide *i* is the CNC Graphical user Interface. While working in Manual Guide *i*, the Fanuc control system is creating a CNC program in the background. The conversion from conversational mode to CNC mode is instant. The programmer can work in either CNC or conversational mode or even both at the same time. Furthermore, industry standard CNC programs can be loaded into and out of the control.

Simulation and Animation

Manual Guide has a more powerful graphics package than many commercial CAD/CAM systems. After a program has been created, a simulated component can be viewed in any direction, or as a 3D model that can be cut, sectioned or magnified to see detail. This simulated component can then be animated to show the cutting process, toolpath, metal removal and the finished component checked for accuracy.

ALPHA SYSTEM XS SERIES

Unique control software developed by Colchester/Harrison enables you to double, triple or even quadruple your productivity compared to other turning methods. The reason our Alpha System is so simple, practical and shop floor friendly is that our engineers designed this with the operator in mind. The Alpha System uses easily recognizable screen graphics along with simple question and answer prompts to guide you. It is also the reason that the Alpha System uses a touch screen, so you can work directly on the screen rather than hunt for the right button to press.

Manual Turning

Turn the key and you are turning manually. The manual screen display shows X and Z positions just like a DRO plus spindle speed, tool number and feed rate.

Even if you haven't used a lathe since your schooldays, you could walk up to a MultiTurn now and cut metal.

One of the advantages of the Alpha System is that you are always in control of the machine and you can manually override machining at any time to gain confidence or to hit the optimum tool performance.

Tool Setting

On many lathes, tool setting can be a difficult and tedious process. No lathe control has a simpler tool setting procedure than the Alpha. Just follow the instructions on three screens and the job is done with the machine automatically calculating offsets and workshifts for you. (These offsets will carry over to the manual guide i side).

Semi-Automatic Turning

With the Colchester/Harrison Alpha System, a wide range of semi-automatic turning operations can be performed. These include parallel turning to stop positions, chamfers and radii, tapers, threads, grooves, box cycles and even contour shapes. These operations can be quickly selected to produce complex components quickly and efficiently. With this, the easy to understand shop floor language with touch screen simplicity means that an operator can learn to machine parts quickly.

Most operators will learn to use the Alpha System in less than half a day!

MULTITURN SC SERIES

SIEMENS CONTROL

Clausing/MultiTurn SC Series:

The Siemens CNC Control is a user-friendly control offering SHOPTURN programming, with ISO Conventional G-code also displayed. The extensive use of graphics on the display simplifies complex machining tasks and minimizes set-up time for experienced and beginner operators.

Siemens user friendly conversational CNC controls offer powerful and versatile control features

- SHOPTURN machining step programming
- 10.4" color display
- Minimum block change time 1ms
- 512 tools, 1024 cutting edges
- 8 MB user memory
- 3D CNC simulation for turning
- Multi Repetitive Cycles for automatic finishing, roughing, drilling, threading, and grooving cycles
- Toolpath graphics
- Programmable increments: 0.0001" min / 99.9999" max
- Thread cutting leads: 0.0001" min / 1.0" max
- Thread repair
- Multiple part program storage
- Constant surface speed / Direct RPM programming
- Menu programming format with operator prompts
- Two axes linear and circular interpolation
- Tool inspection
- Inch/metric data input
- Rigid tapping
- Text search
- Full alpha/numeric keyboard
- Background editing
- Decimal point programming
- Optional stop and block skip

SIEMENS CONTROL FOR SC SERIES

Siemens user-friendly conversational CNC controls offer powerful and versatile programming features that minimize set-up time, regardless of the experience level of the operators. Siemens controls permit editing a program while executing another one. They have a profile editor with graphic support to draw contours by entering known measurements right from the blueprint. Constant monitoring of position, velocity, accelerations, and potential interference prevents undesired machining and helps achieve unmatched part-finish and maximum performance of the machine. The tool inspection feature makes the operator's job easier by allowing him to interrupt the program, check the tool condition (replace it if necessary), reposition the axes and then resume the execution of the program.

TOOLING SYSTEMS FOR MULTITURN

High Accuracy Quick Change Tool Post

	Part #	Tool Selection Sq Max	Max Boring Bar Dia.
CNC1000XS/SC	13IDX-BXA	3/4"	3/4"
CNC2000XS/SC	15IDX-CA	1"	1"
CNC3000XS/SC	18IDX-CA	1"	1"
CNC4000XS/SC	21IDX-CA	1-1/4"	1-1/4"
CNC6/7000XS/SC	31IDX-DA	1-1/2"	2"

Increase Your Productivity with the Optional Automatic Turret

with 0.45 sec. Index Time

Multi-station VDI auto power turret mounted on the front of the cross slide

	Toolholder size	Tool selection	Max boring bar DIA.	No. of stations
CNC1000XS/SC	VDI 30	3/4" (20mm)	1.26" (32mm)	8
CNC2000XS/SC	VDI 30	3/4" (20mm)	1.26" (32mm)	8
CNC3000XS/SC	VDI 30	3/4" (20mm)	1.26" (32mm)	8
CNC4000XS/SC	VDI 30	1" (25mm)	1.57" (40mm)	8

	Disc Diameter	Tooling Type	Shank Size	Max Boring Bar DIA.	No. of Stations
CNC5000XS/SC	14.17"	VDI 50	1" (25mm)	1.26"	8 or 12
CNC6000XS/SC	14.17"	VDI 50	1" (25mm)	1.26"	8 or 12
CNC7000XS/SC	20.7"	VDI 50	1" (25mm)	1.26"	8 or 12

STANDARD EQUIPMENT

- Automatic lubrication system for slideways and ballscrews
- Coolant system
- Fully enclosed, interlocked guarding
- Front removable chip pan
- Work light
- Leveling blocks
- Machine operating manual
- Accuracy chart
- Toolkit
- 230 or 460 3 Phase (other voltage requires transformer or special order)

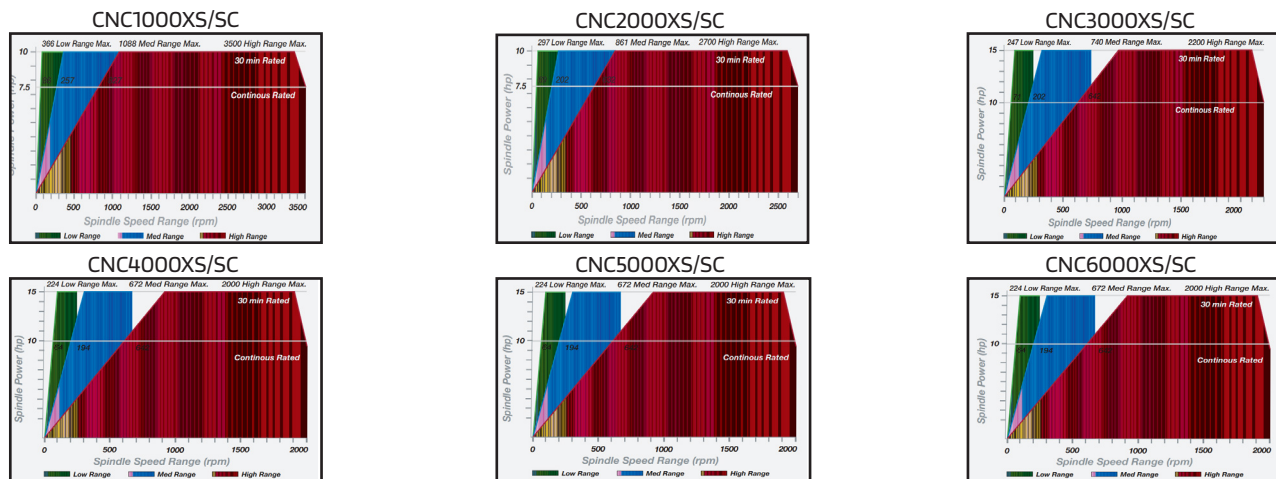

OPTIONAL EQUIPMENT

- Chip conveyor
- Quick change toolpost
- Automatic turret
- Hydraulic tailstock
- Boring bar holders
- Morse taper tool holders
- Superior precision manual 3 & 4 jaw chucks
- Range of 5C collet chucks and collets
- Range of fixed and traveling steady rests
- Workholding faceplate with guard
- Drive plates
- Choice of manual or automatic tooling systems
